

Adding activities from your own Geogebra resources into an existing Geogebra Book

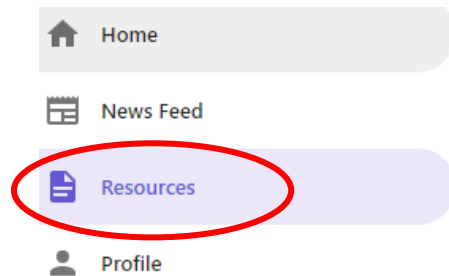

(Document Version: 30 May 2021. By M. Azara)

At the time of producing this guide, it seems there is no obvious and easy way to add your own existing Geogebra activities into a Geogebra book that you are creating.

However, there is a less than obvious way to achieve this:

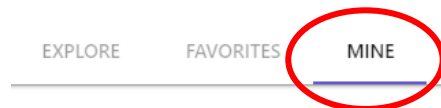

Step 1

Select the resources tab in the main menu. (You must be logged in to your Geogebra account)

Step 2

Select your resources by clicking "Mine"

Step 3

Select the options for the required activity by clicking the vertical ellipsis (3 dots)

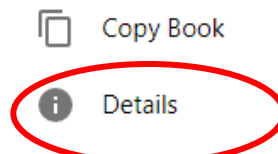

This is also available from within the activity, near the "create Class" button.

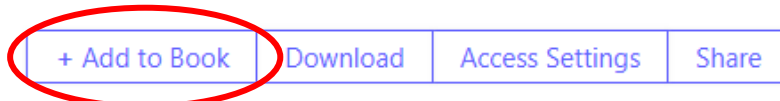

Step 4

From the options menu, select the "details".

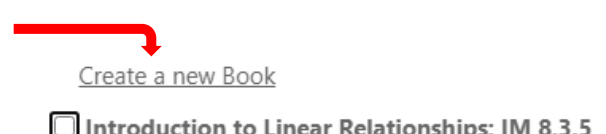

Step 5

You now have access to a button to "add to book"

You will now have the option of creating a new book, or adding the activity to an existing book.

Step 6

You can also select where to place the activity within the existing book, via the drop-down menu
